User
TyreTrust A/S

Construction period
13 months in 2017 and 2018

Turnkey Contractor
DS Flexhal A/S

Tyres with speed – within just 6 weeks, the first section was completed and ready for handover

Within 13 months DS Flexhal both designed and executed this warehouse for TyreTrust. The actual construction period was only 31 weeks, with handover of the first section only six weeks after erecting the first concrete elements.

120,000 tires in stock

The building will be used for storing 120,000 tyres on rims distributed out on 33 storage aisles. The building consists of a 5,950 m² storage unit, a 660 m² area for distributing, as well as a

227 m² area for loading trucks. A loading ramp with four gates has been built since transportation of the tyres has to be done over a short period of time during the seasons where most are changing from winter tyres to summer tyres or vice versa.

Important fire protection

Outside a 2,000 m² sprinkler reservoir have been build. In case of fire, the whole reservoir can be pumped in to one of the three fire sections in just two hours.

01

The Construction includes a loading ramp with four gates for times where many tyres have to be transported in a short period of time.

02

The building is used for storage of 120,000 tyres on rims.
